

# Power Your Business WITH GREEN SAVINGS

## CDL SETS HIGH BENCHMARKS IN GREEN BUILDINGS

As a green developer, environmental responsibility is a top priority for City Developments Limited (CDL). With 26 Green Mark buildings and numerous green accolades, including the BCA Green Mark Champion award under its belt, CDL continues to be challenged to make its buildings even greener to help protect the environment.

Towards this, CDL has found a like-minded partner in Tuas Power. The primary objective of the Tuas Power Green Programme is to help reduce the use of energy in buildings, a common goal shared by both companies. Coming on board this programme, the audit process experienced by CDL was smooth, and business operations in the buildings continued without disruptions – an important consideration for landlords.

## ABOUT THE TUAS POWER GREEN PROGRAMME

The first of its kind in Singapore, the Green Programme seeks to synchronise the needs of both enterprises and the environment, using practical ways to enable and encourage greater energy efficiency and greener ways to do business.

By examining energy usage and providing solutions to help cut down on wastage, the programme helps businesses save energy dollars while creating a greener environment that will guarantee a sustainable future for all.

*The Tuas Power Green Programme is a value-added service by Tuas Power and energy service company G-Energy Global.*

Power Your Business  
With Green Energy
